TECHNOLOGY***

Volume 46 (2004)

ELSEVIER

Amsterdam • Boston • Jena • London • New York • Oxford •
Paris • Philadelphia • San Diego • St. Louis

Information and Software Technology is an international journal published monthly, except in March, April and June when 2 issues are published by Elsevier B.V.

Address for submissions: Papers may be submitted to either of the Co-Editors.

Publication information: Information and Software Technology (ISSN 0950-5849). For 2005, volume 47 is scheduled for publication. Subscription prices are available upon request from the Publisher or from the Regional Sales Office nearest you or from this journal's website (<http://www.elsevier.com/locate/infsof>). Further information is available on this journal and other Elsevier products through Elsevier's website: (<http://www.elsevier.com>). Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by standard mail (surface within Europe, air delivery outside Europe). Priority rates are available upon request. Claims for missing issues should be made within six months of the date of dispatch.

Orders, claims, and product enquiries: please contact the Customer Service Department at the Regional Sales Office nearest you:

Orlando: Elsevier, Customer Service Department, 6277 Sea Harbor Drive, Orlando, FL 32887-4800, USA; phone: (+1) (877) 8397126 [toll free number for US customers], or (+1) (407) 3454020 [customers outside US]; fax: (+1) (407) 3631354; e-mail: usjcs@elsevier.com; **Amsterdam:** Elsevier, Customer Service Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands; phone: (+31) 20-4853757; fax: (+31) 20-4853432; e-mail: nlinfo-f@elsevier.com; **Tokyo:** Elsevier, Customer Service Department, 4F Higashi-Azabu, 1-Chome Bldg., 1-9-15 Higashi-Azabu, Minato-ku, Tokyo 106-0044, Japan; phone: (+81) (3) 5561 5037; fax: (+81) (3) 5561 5047; e-mail: jp.info.@elsevier.com; **Singapore:** Elsevier, Customer Service Department, 3 Killiney Road, #08-01 Winsland House I, Singapore 239519; phone: (+65) 63490222; fax: (+65) 67331510; e-mail: asiainfo@elsevier.com.

Advertising Information. Advertising orders and enquiries can be sent to: **Europe, ROW, USA and Canada:** Advertising orders and enquiries can be sent to: e-mail: commercialsales@elsevier.com. Miss Katrina Barton, Commercial Sales, Elsevier, 84 Theobald's Road, London, WC1X 8RR; phone (+44) (0) 20 7611 4117; fax: (+44) (0) 20 7611 4463. **Japan:** The Advertising Department, Elsevier K.K., 4F Higashi-Azabu, 1-chome Bldg., 1-9-15 Higashi-Azabu, Minato-ku, Tokyo 106-0044, Japan; phone: (+81) (3) 5561-5037; fax: (+81) (3) 5561-5047; e-mail: jp.info@elsevier.com.

USA mailing notice: *Information and Software Technology* (ISSN 0950-5849) is published monthly, except in March, April and June when 2 issues are published, by Elsevier BV (P.O. Box 211, 1000 AE Amsterdam, The Netherlands). Annual subscription price in the USA US\$934 (valid in North, Central and South America), including air speed delivery. Periodical postage rate paid at Jamaica, NY 11431.

USA POSTMASTER: Send address changes to *Information and Software Technology*, Publications Expediting Inc., 200 Meacham Avenue, Elmont, NY 11003.

AIRFREIGHT AND MAILING in the USA by Publications Expediting Inc., 200 Meacham Avenue, Elmont, NY 11003.

Abstracting

This journal is listed in: *ACM Guide to Computing Literature, Applied Science and Technology Index, Computer Literature Index, COMPUSCIENCE, Current Contents, Deadline Newsletter, Engineering Index, Ergonomics Abstracts, INSPEC Database (Computer and Control Abstracts), IT-Digest, Research Alert, Science Citation Index, SciSearch.*

© 2004 Elsevier B.V. All rights reserved.

This journal and the individual contributions contained in it are protected under copyright by Elsevier Science B.V., and the following terms and conditions apply to their use:

Photocopying: Single photocopies of single articles may be made for personal use as allowed by national copyright laws. Permission of the publisher and payment of a fee is required for all other photocopying, including multiple or systematic copying, copying for advertising or promotional purposes, resale, and all forms of document delivery. Special rates are available for educational institutions that wish to make photocopies for non-profit educational classroom use. Permissions may be sought directly from Elsevier's Rights Department in Oxford, UK; phone: (+44) 1865 843830, fax: (+44) 1865 853333, e-mail: permissions@elsevier.com. Requests may also be completed on-line via the Elsevier homepage (<http://www.elsevier.com/locate/permissions>).

In the USA, users may clear permissions and make payment through the Copyright Clearance Center, Inc., 222 Rosewood Drive, Danvers, MA 01923, USA. Tel.: (978) 7508400. Fax: (978) 7504744, and in the UK through the Copyright Licensing Agency Rapid Clearance Service (CLARCS), 90 Tottenham Court Road, London W1P 0LP, UK. Tel.: (+44) 20 7631 5555. Fax: (+44) 20 7631 5500. Other countries may have a local reprographic rights agency for payments.

Derivative Works: Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the publisher is required for resale or distribution outside the institution.

Permission of the publisher is required for all other derivative works, including compilations and translations.

Electronic Storage or Usage: Permission of the publisher is required to store or use electronically any material contained in this journal, including any article or part of an article.

Except as outlined above, no part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without prior written permission of the publisher.

Address permissions requests to: Elsevier Rights Department, at the fax and e-mail addresses noted above.

Notice: No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein. Because of rapid advances in the medical sciences, in particular, independent verification of diagnoses and drug doses should be made.

Although all advertising material is expected to conform to ethical (medical) standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

Editorial

1. Background

Software is playing an increasingly important role in our day-to-day life. However, software today—unlike automobiles, bridges or office towers—is produced without the benefit of established standards. It is well known that there are still unresolved errors in many of the software systems that we are using every day. The aim of the quality software conference series is to provide a forum to bring together researchers and practitioners working on improving the quality of software, to present new results and exchange ideas in this challenging area.

In 2003, the conference evolved from an Asian-Pacific based regional event to an International Conference on Quality Software (QSIC)¹. The response to the call for papers was overwhelming: a total of 180 submissions from 28 countries were received. Among them, 40 regular papers, nine experience reports and five short papers were selected by the Program Committee for presentation at the conference held on November 6–7, 2003 in Dallas, Texas, USA.

After the conference, authors of seven regular papers were invited to submit revised and expanded versions for a special issue of *Information and Software Technology*. After a further reviewing process, five of them were accepted for publication in this special issue.

2. The papers

Reliability is an important aspect of software quality. How to assess software reliability remains a challenging problem for software developers, and is a hot topic for research. The paper entitled ‘How to Test for Optimal Software Reliability Assessment’ by Cai, Li and Liu reports on an innovative approach based on controlled Markov chains. It is argued that, under the assumption that the code of the software under test is frozen and the number of tests is given a priori, software reliability assessment can be treated as a control problem. To minimize the resulting variance of

software reliability estimate, the authors propose an adaptive software testing approach. Simulation data show that the adaptive approach works much better than the random test strategy, as the resulting variance from the former is much smaller than that of the latter.

As the most widely used software validation method, testing is a popular topic of the quality software conference. The paper ‘Mirror Adaptive Random Testing’ by T.Y. Chen et al. proposes a new approach to random testing that is extended from adaptive random testing. It is achieved by choosing random test points in one subdomain and then mirroring them in other subdomains by simple translation functions, thus avoiding a large number of ‘distance’ calculations that are necessary to ensure a good separation of test cases, but can be expensive computationally. A thorough simulation study has been undertaken to determine the efficacy of the approach.

Program verification by theorem proving has a long history of almost 40 years, but has so far been less successful than other validation methods such as testing and model checking. To make the technique more applicable, the paper ‘Verifying Haskell Programs by Combining Testing, Model Checking and Theorem Proving’ by Dybjer, Qiao and Takeyama pursues an integrated methodology. Agda/Alfa, an interactive proof assistant for dependent type theory, has been extended to include a random testing tool and a BDD-based model checker. Two non-trivial Haskell programs are validated using the combined approach, demonstrating how a good balance between the confidence in program correctness and the cost of verification can be achieved.

As model-driven development of .NET software has become popular, a tool supporting the validation of scenarios is invaluable to software developers. The paper ‘Instrumenting Scenarios in a Model-Driven Development Environment’ by Grieskamp, Tillmann and Veanes presents such a tool—SpecExplorer. Scenarios are described in a modelling language called Spec#, which is similar in appearance to C#. A real application, CTAS Weather Control Logic, is used as a case study to illustrate several features of the tool: random execution, finite state machine generation and scenario conformance checking.

¹ The new acronym reminds us of the high quality and strength of Cu-SiC, a ceramic reinforced metal.

The lack of commonly accepted metrics for quality in software industry makes it difficult for users to compare software quality across products. The paper ‘The Software Evaluation Framework ‘SEF’ Extended’ by Wong addresses this issue, reporting a quantitative study on stakeholders’ understanding of software quality. The metrics used in the Software Evaluation Framework are described, and an analysis is made of how these metrics compare in the measurements of software characteristics. The model is empirically tested with quantitative techniques.

3. Looking ahead

After the success of three quality software conferences, the Fourth International Conference on Quality Software (QSIC 2004) is held in Braunschweig, Germany on September 8–9, 2004. Hans-Dieter Ehrich, Technical University of Braunschweig, Germany, and Klaus-Dieter Schewe, Massey University, New Zealand, serve as

program co-chairs. Please visit <http://qsic2004.tu-bs.de> for more information.
